

MINESIGHT MODELLINK

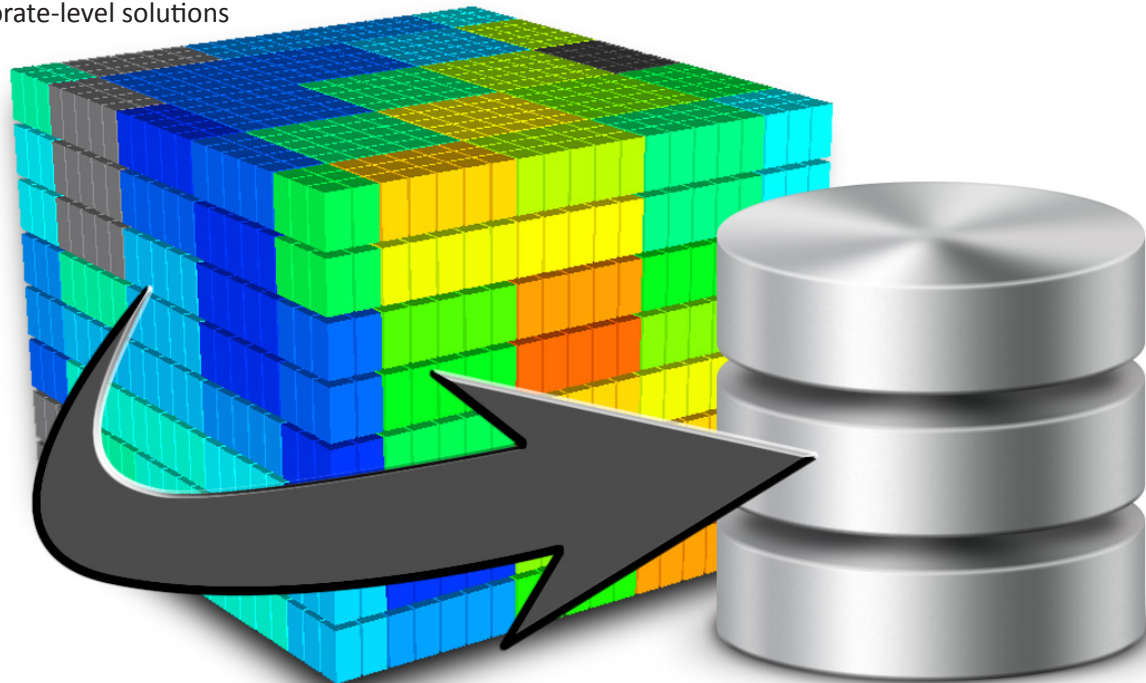

OPEN DATABASE CONNECTIVITY TO BLOCK MODELS

OVERVIEW

Save time and money accessing block models directly through MineSight ModelLink. Instead of loading gigabytes of information into massive text files, mine designers, planners, and schedulers rely on MSModelLink's open database connectivity (ODBC) driver. Block models can be read and understood by Microsoft SQL database programs, or by mining companies' reporting programs that are based on ODBC.

KEY POINTS

- ⦿ ODBC Driver (Windows DLL)
- ⦿ Provides read-only access to Project Control File/Model
- ⦿ Block model access from any ODBC compliant client
- ⦿ Structured Query Language (SQL): Convenient, powerful, portable
- ⦿ Updates block model changes to Electronic Data Warehouse
- ⦿ Streamlined extraction process
- ⦿ Ideal for corporate-level solutions
