

MINESIGHT® DATA SECURITY SYSTEM

MANAGE DATA SAFELY & EFFICIENTLY

OVERVIEW

MineSight Data Security System organizes and manages MineSight 3D objects to ensure data in large, multi-user environments is managed safely and efficiently. Information is stored in an open database with customized access and permissions for each project team member to view or update, thus guaranteeing each team member is working with up-to-date information.

KEY POINTS

- ⊙ Safeguard data objects
- ⊙ Access control
- ⊙ Automated updating
- ⊙ Auditing
- ⊙ Update tracking
- ⊙ Quick backup/recovery

KEY FEATURES

- > Customize read/write privileges to non-dependent MineSight 3D objects such as geometry, grid sets, plot layouts, title blocks, materials, and items
- > Create read-only copies of your objects
- > Tag objects for auditing
- > Alert for possible overwrite violations
- > Manage and organize new and updated objects automatically
- > Instant or scheduled updates
- > Organize by project group, mining function, or task status
