**MINTEC SEMINAR (APRIL, 26-30, 2010)**

2010 will be the 27<sup>th</sup> year for the annual Mintec Seminar. As the mining industry moves through some economically challenging times, it is most important to maximize effective utilization of existing resources. The annual Mintec Seminar is a key opportunity to learn how to get the most out of MineSight software and to become familiar with the many developments released over the past year. The seminar also gives attendees the opportunity to share experiences with other clients and to participate in shaping the direction of future software development. The format of the seminar includes two days of informative presentations from Mintec staff and MineSight clients, followed by three days of workshops where attendees have the opportunity to learn firsthand about best practices in implementing existing and new products. Look for the workshop abstracts in upcoming issues of the *MineSight Monitor*. During the seminar, Mintec staff will also provide one-on-one consulting sessions for clients with specific questions or challenges who bring their data and schedule appointments.
